

Moodle Wiki (Student version)

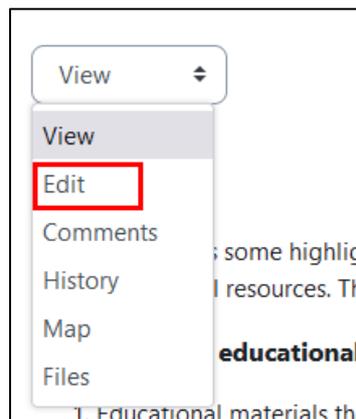

Wikis are a good way to get information online fast (wiki means “quick” in Hawaiian). They are also a great collaboration tool, as anyone with editing access to a wiki can change the information in it and add pages.

Edit a page

1. Enter the wiki by clicking on its name in the course home page:

2. To edit a page, click on the dropdown list at the top of the page and click on **Edit**.

3. The HTML format editor will open - this has many features that will be familiar from Microsoft Word or other text editors.

This wiki contains some highlights from the workshop (with some adaptations) and focuses on finding and creating open educational resources. The full set of slides is also available.

What are open educational resources?

1. Educational materials that are made freely available
2. Available for use and adaptation under an open (creative commons) license - dependant upon the license.
3. Do not provide a qualification or access to University

Types of open educational resources

- Full courses

4. When you have finished editing click the **Preview** button at the bottom of the page. If you are happy with your changes click **Save**.

Create a new wiki page

1. Click on the dropdown menu to go into **Edit** mode. Type the name of the new page surrounded by double square brackets, for example to create a page called “Learning objects” type **[[Learning objects]]**. Click on the **Save** button.
2. The name of the new page will appear in red – this indicates that the page does not exist yet. Click on the name.

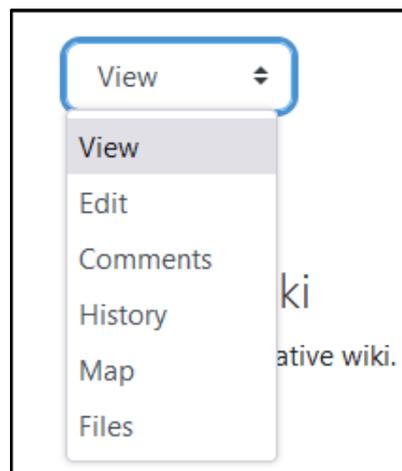

3. Click on the **Create page** button. Add some content to your new page using the HTML format editor and click **Save**.

Link to an existing wiki page

Navigating wikis can get a bit confusing. To help you find your way around it's a good idea to include a link back to the previous page when you create a new page. You can always get back to the home page by clicking on the wiki's name in the Breadcrumb trail at the top of the page.

1. To link to an existing page in the wiki, click on the **Edit** tab and type the page's name in double square brackets, for example **[[Full courses]]**.
2. Click **Save**. The page's name will appear as a clickable link.

Other Wiki options

The **Comments** option allows you to read and make comments on any wiki page.

The **History** option enables you to see who made what changes to the page and when. It also allows you to compare different versions of the page.

The **Map** option provides different ways of viewing the pages in the wiki. You can see a list of the pages you have contributed to; links to and from the page you are viewing; or a list of recently updated pages, etc.

The **Files** option allows you to access the files, such as images, uploaded to the wiki.
